

General Description

HX3 is a family of USB 3.0 hub controllers compliant with the USB 3.0 specification revision 1.0. HX3 supports SuperSpeed (SS), Hi-Speed (HS), Full-Speed (FS), and Low-Speed (LS) on all the ports. It has integrated termination, pull-up, and pull-down resistors, and supports configuration options through pin-straps to reduce the overall BOM of the system.

HX3 includes the following Cypress-proprietary features:

Shared Link™: Enables extra downstream (DS) ports for on-board connections in embedded applications

Ghost Charge™: Enables charging of devices connected to the DS ports when no host is connected on the upstream (US) port

Features

- USB-IF Certified Hub, TID# 330000060, 30000074
- Supports up to Four USB 3.0-Compliant DS ports
 - All ports support SS (5 Gbps), and are backward-compatible with HS (480 Mbps), FS (12 Mbps), and LS (1.5 Mbps)
 - SS and USB 2.0 Link Power Management (LPM)
 - Dedicated Hi-Speed Transaction Translators (Multi-TT)
 - LED status indicators – suspend, SS, and USB 2.0 operation
- Shared Link™ for Embedded Applications
 - Each DS port can simultaneously connect to an embedded SS device and a removable USB 2.0 device
 - Enables up to eight device connections
- Enhanced Battery Charging
 - Each DS port complies with the USB Battery Charging v1.2 (BC v1.2) specification
 - Ghost Charge™: Each DS port can emulate a Dedicated Charging Port (DCP) when the host is not connected to the US port
 - Accessory Charger Adapter Dock (ACA-Dock): Enables charging and simultaneous data transfer for a smart phone or a tablet acting as a host compliant to BC v1.2
 - Apple charging supported on all DS ports
- Integrated ARM® Cortex™-M0 CPU
 - 16 KB RAM, 32 KB ROM
 - Configure GPIOs for overcurrent protection, power enable, and LEDs
 - Upgrade firmware using (a) I²C EEPROM or (b) an external I²C master
- Vendor-Command Support to Implement a USB-to-I²C Bridge
 - Firmware upgrade of an external ASSP connected to HX3 through USB
 - In-System Programming (ISP) of the EEPROM connected to HX3 through USB
- Extensive Configuration Support
 - Pin-strap configuration for the following functions:
 - Vendor ID (VID)
 - Charging support for each DS port
 - Number of active ports
 - Number of non-removable devices
 - Ganged or individual power switch enables for DS ports
 - Power switch polarity selection
 - Custom configuration modes supported with eFuse, I²C EEPROM, or I²C slave
 - SS and USB 2.0 PHY parameters
 - Product ID (PID)/VID, manufacturer, and product string descriptors
 - Swap DP/DM signals for flexible PCB routing
- Software Features
 - Microsoft WHQL-certified for Windows XP/Vista/7/8/8.1
 - Compatible with Mac OS 10.9 and Linux kernel version 3.11
 - Customize configuration parameters with the easy-to-use Cypress's "Blaster Plus" software tool
- Flexible Packaging Options
 - 68-pin QFN (8 × 8 × 1.0 mm)
 - 88-pin QFN (10 × 10 × 1.0 mm)
 - 100-ball BGA (6 × 6 × 1.0 mm)
 - Industrial temperature range (–40 °C to +85 °C)

Architecture Overview

The [Block Diagram on page 2](#) shows the HX3 architecture. HX3 consists of two independent hub controllers (SS and USB 2.0), the Cortex-M0 CPU subsystem, an I²C interface, and port controller blocks.

SS Hub Controller

This block supports the SS hub functionality based on the USB 3.0 specification. The SS hub controller supports the following:

- SS link power management (U0, U1, U2, U3 states)
- Full-duplex data transmission

USB 2.0 Hub Controller

This block supports the LS, FS, and HS hub functionalities. It includes the repeater, frame timer, and four transaction translators.

The USB 2.0 hub controller block supports the following:

- USB 2.0 link power management (L0, L1, L2, L3 states)
- Suspend, resume, and remote wake-up signaling
- Multi-TT (one TT for each DS port)

CPU

The ARM Cortex-M0 CPU subsystem is used for the following functions:

- System configuration and initialization
- Battery charging control
- Vendor-specific commands for the USB-to-I²C bridge
- String-descriptor support
- Suspend status indicator
- Shared Link support in embedded systems

I²C Interface

The I²C interface in HX3 supports the following:

- I²C Slave, Master, and Multi-master configurations
 - Configure HX3 by an external I²C master in I²C slave mode
 - Configure HX3 from an I²C EEPROM
 - Multi-master mode to share EEPROM with other I²C masters
- In-System Programming of the I²C EEPROM from HX3's US port

Port Controller

The port controller block controls DS port power to comply with the BC v1.2 and USB 3.0 specifications. This block also controls the US port power in the ACA-Dock mode. Control signals for external power switches are implemented within the chip. HX3 controls the external power switches at power-on to reduce in-rush current.

The port controller block supports the following:

- Overcurrent detection
- SS and USB 2.0 port indicators for each DS port
- Ganged and individual power control modes
- Automatic port numbering based on active ports

Applications

- Standalone hubs
- PC and tablet motherboards
- Docking station
- Hand-held cradles
- Monitors
- Digital TVs
- Set-top boxes
- Printers

Notes

1. DS1 and DS2 are Shared link Ports.
2. BGA Industrial Grade packages are limited to 1 W of active power. For power calculations refer to [Table 10](#) on page 33.

Product Features

Shared Link

Figure 1. Application of Shared Link in a Notebook

Example: Shared Link Provides Six USB Ports in a Notebook

USB 3.0 Port Split Into SS Port and Standard USB 2.0 Port

Shared Link is a Cypress-proprietary feature that enables a USB 3.0 port to be split into an embedded SS port and a standard USB 2.0 port. Shared Link enables a maximum of eight DS ports from a four-port USB 3.0 hub.

For example, if one of the DS ports is connected to an embedded SS device, such as a USB 3.0 camera, HX3 enables the system designer to reuse the USB 2.0 signals of that specific port to connect to a standard USB 2.0 port. Figure 1 shows how Shared Link can be used in an application.

Figure 2. DS Port VBUS Control in Shared Link

The Shared Link mode requires a separate VBUS control for the removable USB 2.0 device and the embedded SS device. Figure 2 shows the VBUS control implementation.

To ensure that the embedded SS device does not fall back to USB 2.0 operation, an external power switch is required. This switch is controlled by HX3, which generates an output signal called DSx_VBUSEN_SL. This signal controls the VBUS for the embedded device.

DSx_PWREN is another output signal generated by HX3 and controls VBUS for the removable USB 2.0 device. For example, when an overcurrent condition occurs, DSx_PWREN turns off the port power.

Ghost Charge

Ghost Charge is a Cypress-proprietary feature for charging USB devices on the DS port when the US port is not connected to a host. For example, in a docking station with HX3 as shown in Figure 3, when the laptop is undocked, HX3 will emulate a dedicated charging port (DCP) to provide charge to a phone connected on a DS port.

Figure 3. Ghost Charge

Charge a smartphone without docking the notebook

When the US port is disconnected from the host, HX3 detects if any of the DS ports are connected to a device requesting charging. It determines the charging method and then switches to the appropriate signaling based on the detected charging specification as shown in Figure 4. The hub either emulates a USB-compliant dedicated charging port by connecting DP and DM (see the BC v1.2 specification) or other supported proprietary charging schemes.

Figure 4. Ghost Charge Implementation in HX3

Ghost Charge is enabled by default and can be disabled through configuration. Refer to Configuration Options on page 24.

Vendor-Command Support

HX3 supports vendor-specific requests and can also enumerate as a vendor-specific device. The vendor-specific request can be used to (a) bridge USB and I²C and (b) configure HX3. This feature can be used for the following applications:

- Firmware upgrade of an external ASSP connected to HX3 through USB
- In-System programming (ISP) of an EEPROM connected to HX3 through USB

Note

3. 124 kΩ is the recommended RID_A value as per BC v1.2 specification, but some portable devices use custom RID_A values.

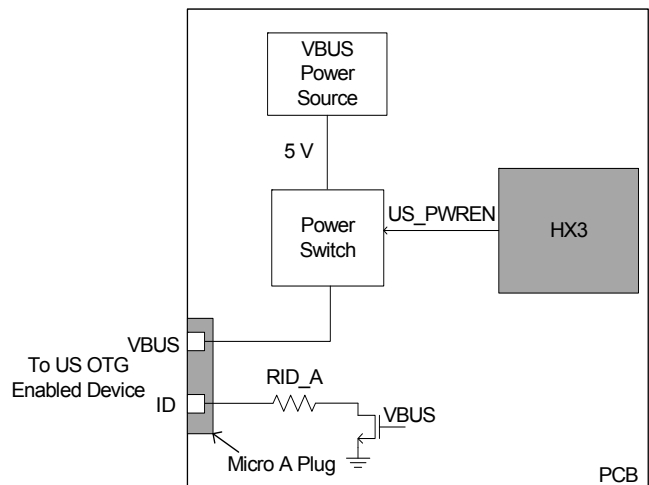

ACA-Dock Support

In traditional USB topologies, the host provides VBUS to enable and charge the connected devices. For OTG hosts, however, an ACA-Dock provides VBUS and a method to charge the host. HX3 supports the ACA-Dock standard (see BC v1.2 specification) by integrating the functions of the adapter controller.

Figure 5 shows the ACA-Dock system. If the ACA-Dock feature is enabled, HX3 turns on the external power switch to drive VBUS on the US port. To inform the OTG host that it is connected to an ACA-Dock, the ID pin is tied to ground using a resistor RID_A³ as shown in Figure 5. The ACA-Dock feature can be disabled using the Configuration Options on page 24.

For example, a BC v1.2 compliant phone such as a Sony Xperia (neo V) can be docked to a HX3-based ACA-Dock system. The phone acts as an OTG host and the ACA-Dock charges the phone connected to the US port while also powering the four DS ports.

| VBUS_US | | PWR | 22 | H2 | CYUSB3324/3328: Connect the VBUS_US pin to the local 5 V supply. If ACA-Dock mode is disabled using Configuration Options on page 24 , this pin must be connected to VBUS from US port. Other part numbers: This pin must be connected to VBUS from US port. |
| VBUS_DS | | PWR | 23 | G2 | This pin is used to power the Apple-charging circuit in HX3. For BC v1.2 compliance testing, connect pin to GND. For normal operation, connect pin to local 5 V supply. |
| AVDD33 | | PWR | 9, 70, 75, 80 | A4, A7, B6, F3 | 3.3 V analog supply |
| VDD_IO | | PWR | 34, 66, 88 | B4, E7, G6 | 3.3 V I/O supply |
| USB Precision Resistors | | | | | |
| RREF_USB2 | | A | 7 | E2 | Connect pin to a precision resistor (6.04 kΩ ±1%) to generate a current reference for USB 2.0 PHY. |
| RREF_SS | | A | 32 | H5 | Connect pin to a precision resistor (200 Ω ±1%) for SS PHY termination impedance calibration. |

System Interfaces

Upstream Port (US)

This port is compliant with the USB 3.0 specification and includes an integrated 1.5 kΩ pull-up and termination resistors. It also supports ACA-Dock to enable charging an OTG host connected on the US port.

Downstream Ports (DS1, 2, 3, 4)

DS ports are compliant with the USB 3.0 specification and integrate 15 kΩ pull-down and termination resistors. Ports can be disabled or enabled, and can be set to removable or non-removable options. BC v1.2 charging is enabled by default and can be disabled on each DS port using the configuration options (see [Configuration Options](#)).

Communication Interfaces (I²C)

The interface follows the Inter-IC Bus specification, version 3.0, with support for the standard mode (100 kHz) and the fast mode (400 kHz) frequencies. HX3 supports I²C in the slave and master modes. The I²C interface supports the multi-master mode of operation. Both the SCL and SDA signals require external pull-up resistors based on the specification. VDD_IO for HX3 is 3.3 V and it is expected that the I²C pull-up resistors will be connected to the same supply.

Oscillator

HX3 requires an external crystal with a frequency of 26 MHz and an accuracy of ±150 ppm in parallel resonant, fundamental mode. The crystal drive circuit is capable of a low-power drive level (<200 μW). The crystal connection to the XTL_OUT and XTL_IN pins is shown in [Figure 14](#).

Figure 14. Crystal Connection

GPIOs

HX3 GPIOs are used for overcurrent sensing, controlling external power switches, and driving LEDs. These pins can sink up to 4 mA current each. GPIOs also enable pin-straps for input configuration. Refer to [Table 6](#) for more details.

Power Control

The PWR_EN[1-4] and OV_CURR[1-4] pins interface HX3 to external power switches. These pins are used to control power switches for DS port power and monitor overcurrent conditions. The power switch polarity and the power control mode (individual and ganged) can be changed using the configuration options.

Reset

HX3 operates with two external power supplies, 3.3 V and 1.2 V. There is no power sequencing requirement between these two supplies. However, the RESETN pin should be held LOW until both these supplies become stable.

The RESETN pin can be tied to VDD_IO through an external resistor and to ground (GND) through an external capacitor (minimum 5 ms time constant), as shown in [Figure 15](#). This creates a clean reset signal for power-on reset (POR).

HX3 does not support internal brown-out detection. If the system requires this feature, an external reset should be provided on the RESETN pin when supplies are below their valid operating ranges.

Figure 15. Reset Connection

Configuration Mode Select

Configuration options are selected through the MODE_SEL pins and the pin-strap enable pin (PIN_STRAP). After power-up, these pins are sampled by an on-chip bootloader to determine the configuration options (see [Table 5](#)).

Table 5. HX3 Boot Sequence

| MODE SEL[1] | MODE SEL[0] | HX3 Configuration Modes |
|-------------|-------------|--|
| 0 | 0 | Reserved. Do not use this mode. |
| 1 | 1 | Internal ROM configuration |
| 0 | 1 | I ² C Master, read configuration from I ² C EEPROM* |
| 1 | 0 | I ² C Slave, configure from an external I ² C Master |

* Download Cypress-provided firmware from www.cypress.com/hx3.

Configuration Options

HX3 can be configured by using one of the following:

- eFuse (one-time programmable memory)
- Pin-Strap (read configuration from dedicated pins at power on)
- External I²C slave such as an EEPROM
- External I²C master

The I²C master/slave configuration overrides the pin-strap configuration. Pin-straps override the eFuse configuration, and the eFuse configuration overrides the internal ROM configuration.

eFuse Configuration

HX3 contains eFuses, which are OTP elements on the chip that can be electrically blown. The eFuses are read by the bootloader to determine the customer-specific configurations. eFuse programming is supported only at factory and distributor locations where programming conditions can be controlled. eFuse programming is supported under the following conditions:

Temperature range of 25 °C–70 °C and programming voltage of 2.5 V–2.7 V.

Pin-Strap Configuration

Pin-straps are supported for select product options (see Table 1 on page 5) to provide reconfigurability without an additional EEPROM. The pin-strap configuration is enabled by pulling the Pin #63 of 88-pin QFN HIGH. Table 6 on page 25 shows the configuration options supported through pin-straps and the GPIOs used for this purpose. Figure 16 and Figure 17 show how the GPIOs need to be connected if pin-strap and LED connection are required or only pin-strap is required.

HX3 samples pin-strap GPIOs at power-up. Floating straps are considered as invalid and the default configuration is used. If PIN_STRAP (Pin #63 of 88-pin QFN) is floating, all strap inputs are considered invalid. A GPIO is considered strapped “1” or “0” when connected with a weak pull-up (10 kΩ) or pull-down (10 kΩ) respectively. After the initial sampling at power-up and reset, the GPIOs are used in their normal functions.

Figure 16. Pin-Strap With LED or LED-Only Connection

Figure 17. Pin-Strap Connection

Table 6. Pin-Strap Configuration

| 88-QFN Pin # | Pin-Strap Name | Strapped '0' ^[11] | | Strapped '1' ^[11] | |
|--------------|--|--|------------------|---|-----------------|
| 30 | I2C_DEV_ID ^[12] | ID 0: HX3 I ² C slave address (7 bits) is 0x60. This is also the default I ² C slave address for the 68-pin QFN package. | | ID 1: HX3 I ² C slave address (7 bits) is 0x58 | |
| 31 | PWR_SW_POL | Power enable and overcurrent will be active LOW | | Power enable and overcurrent will be active HIGH | |
| 2 | ACA_DOCK | Disabled | | Enabled | |
| 84 | PWR_EN_SEL | Individual | | Gang | |
| 63 | PIN_STRAP ^[13] | No pin-strapping | | Pin-strapping configuration enabled | |
| 4 | PORT_DISABLE ^[1] | PORT_DISABLE ^[1:0] = b'00: DS1, DS2, DS3, DS4 active b'01: DS1, DS2, DS3 active b'10: DS1, DS2 active b'11: DS1 active Pin-straps cannot enable ports disabled by factory setting. | | | |
| 3 | PORT_DISABLE ^[0] | | | | |
| 6 | NON_REMOVABLE ^[1] ^[14] | NON_REMOVABLE ^[1:0] = b'00: DS1, DS2, DS3, DS4 removable b'01: DS1, DS2, DS3 removable b'10: DS1, DS2 removable b'11: DS1 removable | | | |
| 5 | NON_REMOVABLE ^[0] ^[14] | | | | |
| 85 | VID ^[2] | Reserved. If PIN_STRAP is enabled and CY VID is required, strap VID ^[2:0] to '1'. | | | |
| 64 | VID ^[1] | | | | |
| 43 | VID ^[0] | | | | |
| 38 | DS1_CDP_EN ^[15] | strapped '0' | strapped '1' | strapped '0' | strapped '1' |
| | | DS1 CDP enabled | DS1 CDP disabled | DS1 CDP disabled | DS1 CDP enabled |
| 86 | DS2_CDP_EN ^[15] | DS2 CDP enabled | DS2 CDP disabled | DS2 CDP disabled | DS2 CDP enabled |
| 87 | DS3_CDP_EN ^[15] | DS3 CDP enabled | DS3 CDP disabled | DS3 CDP disabled | DS3 CDP enabled |
| 35 | DS4_CDP_EN ^[15] | DS4 CDP enabled | DS4 CDP disabled | DS4 CDP disabled | DS4 CDP enabled |

Notes

11. See Figure 16 and Figure 17.
12. I2C_DEV_ID is valid only when HX3 is in I²C slave mode.
13. VID, PORT_DISABLE, NON_REMOVABLE are group straps. If one of the pins in a group strap is floating (INVALID), that group input will be INVALID and the default will not be overwritten.
14. These DS ports are exposed ports and the connected devices can be removed.
15. DS_x_CDP_EN will be active LOW input when PWR_SW_POL is set to active LOW; similarly DS_x_CDP_EN will be active HIGH input when PWR_SW_POL is set to active HIGH.

I²C Configuration

When enabled for I²C configuration through the MODE_SEL pins (See Table 5 on page 24), HX3 can be configured as an I²C master or as an I²C slave. HX3's configuration data is a maximum of 197 bytes and HX3's firmware is 10 KB. Note that HX3's firmware also includes configuration settings.

HX3 as I²C Master

HX3 reads configurations from an external I²C EEPROM with sizes ranging from 16 to 64 KB. An example of a supported EEPROM is 24LC128. Based on the contents of the bSignature and bImageType fields in Table 7 on page 26, HX3 performs one of the following actions:

- Loads custom configuration settings from the EEPROM when bSignature is "CY" and bImageType is 0xD4.
- Loads the Cypress-provided firmware from the EEPROM when bSignature is "CY" and bImageType is 0xB0. This firmware also includes configuration settings.
- If bSignature ≠ "CY", HX3 enumerates in the vendor-specific mode.

The contents of the EEPROM can be updated with the easy-to-use [Cypress Blaster Plus](#) tool. Blaster Plus is a

GUI-based tool to configure HX3. This tool allows to do the following:

- Download the Cypress-provided firmware from a PC via HX3's US port and store it on an EEPROM connected to HX3's I²C port.
- Read the configuration settings from the EEPROM. These settings are displayed in the Blaster Plus GUI. Modify settings as required.
- Write back the updated settings on to the EEPROM. In addition, an image file can be created for external use.

The Blaster Plus tool, user guide, and the Cypress-provided firmware are available at www.cypress.com/hx3.

HX3 as I²C Slave

An external I²C master can program the configuration settings into HX3 according to the EEPROM map in Table 7 on page 26. Alternatively, the HX3 firmware (<10 KB), which includes configuration settings, can also be programmed. It is recommended to use the Blaster Plus tool to create the HX3 firmware or configuration image file. HX3's I²C slave address needs to be provided while creating the image file. Refer to Table 6 for HX3's I²C slave address.

Table 7. EEPROM Map

| I ² C Offset | Bits | Name | Default | Description |
|-------------------------|------|------------------------|---------|--|
| 0 | 7:0 | bSignature LSB ("C") | 0x43 | The first byte of the 2-byte signature initialized with "CY" ASCII text. When the signature is not valid, the hub enumerates as a vendor-specific device. |
| 1 | 7:0 | bSignature MSB ("Y") | 0x59 | The second byte of the 2-byte signature initialized with "CY" ASCII text. When the signature is not valid, the hub enumerates as a vendor-specific device. |
| 2 | 7:6 | bImageCTL | b'00 | Reserved |
| | 5:4 | I ² C Speed | b'11 | b'01: 400 kHz b'11: 100 kHz |
| | 3:1 | bImageCTL | b'000 | Reserved |
| | 0 | bImageCTL | 0 | 0: Execution binary file 1: Data file |
| 3 | 7:0 | bImageType | 0xD4 | 0xD4: Load only configuration 0xB0: Load firmware boot image All other bImageType will return an error code. |
| 4 | 7:0 | bD4Length | 40 | bD4Length is defined in bytes as the length from offset 5. I ² C offset bytes 0–4 are the header bytes. bD4Length = 6: Only update VID, PID, and DID bD4Length = 18: Configuration options (no PHY trim) bD4Length = 40: Configuration options with PHY trim options bD4Length > 40: User must provide valid string descriptors bD4Length > 192: Error |
| 5 | 7:0 | VID [7:0] | 0xB4 | Custom Vendor ID - LSB |
| 6 | 7:0 | VID [15:8] | 0x04 | Custom Vendor ID - MSB |
| 7 | 7:0 | PID [7:0] | 0x04 | Custom Product ID (PID) |
| 8 | 7:0 | PID [15:8] | 0x65 | Default: 0x6504 If separate PID is used for USB 2.0, the USB 2.0 PID will be read from offset 35 and 36. Else, USB 2.0 PID = PID+2; Default: 0x6506 |

Table 7. EEPROM Map (continued)

| I ² C Offset | Bits | Name | Default | Description |
|-------------------------|------|------------------------|---|---|
| 9 | 7:0 | DID [7:0] | 00 - 88-pin QFN, 10 - 68-pin QFN | Custom Device ID - revision - LSB |

EMI

HX3 meets the EMI requirements outlined by FCC 15B (USA) and EN55022 (Europe) for consumer electronics. HX3 tolerates EMI conducted by aggressors outlined by the above specifications and continues to function as expected.

ESD

HX3 has a built-in ESD protection on all pins. The ESD protection level provided on these ports is 2.2 kV Human Body Model (HBM) based on the JESD22-A114 specification.

Absolute Maximum Ratings

Exceeding maximum ratings may shorten the useful life of the device. User guidelines are not tested.

Storage temperature..... -65 °C to +150 °C
 Operating temperature -40 °C to +85 °C

Electrostatic discharge voltage 2200 V
 Oscillator or crystal frequency 26 MHz ±150 ppm
 I/O voltage supply 3 V to 3.6 V
 Maximum input sink current per I/O 4 mA

Electrical Specifications

HX3 meets all USB-IF Electrical Compliance specifications.

DC Electrical Characteristics

Table 8. DC Electrical Characteristics

| Parameter | Description | Conditions | Min | Typ | Max | Units |

Power Consumption

Table 9 provides the power consumption estimates for HX3 under different conditions. Table 10 summarizes the power consumption for various combinations of devices connected to DS ports.

For example, to calculate the HX3 power consumption for three SS devices connected to DS ports (and no device connected to one DS port), and a US port connected to a USB 3.0 host:

$$\text{Power consumption} = [a] + 2*[g] = 492.5 + 2*76 = 644 \text{ mW}$$

[a] is the active power consumption for the US port connected to a USB 3.0 host and the SS device connected to the DS port.

[g] is the incremental power consumption for an additional SS device connected to the DS port.

Table 9. Power Consumption Estimates for Various Usage Scenarios

| Device Condition | Number and Speed of DS Ports Connected | Typical Consumption | | | Comments |
|--|--|---------------------|-------|------------|----------|
| | | Supply Current (mA) | | Power (mW) | |
| | | 1.2 V | 3.3 V | | |

Table 10. Power Consumption Under Various Configurations

| Configuration | Number of DS Devices Connected With Data Transfer | Typical Consumption | | | Comments |
|--|---|---------------------|-------|------------|---------------------|
| | | Supply Current (mA) | | Power (mW) | |
| | | 1.2 V | 3.3 V | | |
| USB 3.0 4-Port Hub (USB 3.0 host) | 4 SS devices | 322 | 101 | 720 | [a] + 3*[g] |
| | 3 SS + 1 HS devices | 297 | 121 | 755 | [d] + 2*[g] |
| | 3 SS devices | 283 | 92 | 644 | [a] + 2*[g] |
| USB 3.0 4-Port Hub with one port disabled (USB 3.0 host) | 3 SS devices | 272 | 83 | 600 | [a] + 2*[g] - [j] |
| | 2 SS + 1 HS devices | 247 | 103 | 634 | [d] + [g] - [j] |
| Shared Link with eight DS ports | 4 SS + 4 HS devices | 357 | 189 | 1052 | [d] + 3*([g] + [h]) |
| USB 2.0 4-Port Hub (USB 2.0 host) | 4 HS devices | 72 | 105 | 432 | [e] + 3*[h] |
| | 3 HS + 1 FS devices | 72 | 99 | 413 | [e] + 2*[h] + [i] |

Notes

18. US port in low-power state (SS in U3 and USB 2.0 in L2).

19. All four DS ports are enabled.

20. US SS disabled using configuration options. Refer to Table 7 on page 26 for I²C configuration options.

21. Power saving applicable only with a USB 3.0 host. DS ports can be disabled through configuration options. Refer to Table 6 on page 25 for pin-strapping and Table 7 on page 26 for I²C configuration options.

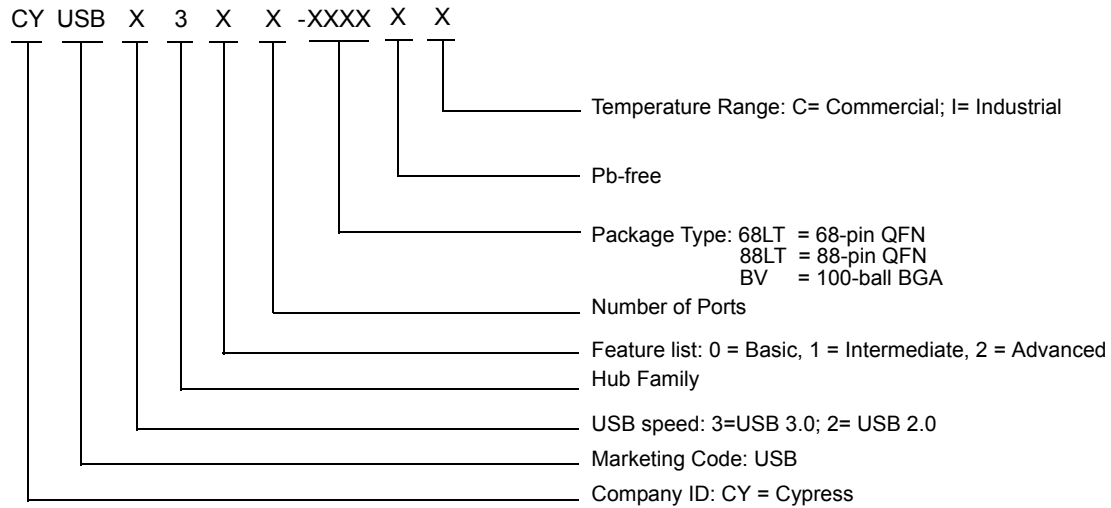

Ordering Information

Table 11 lists HX3's ordering information. The table contains only the part numbers that are currently available for order. Additional part numbers for industrial temperature range can be made available on request. For more information, visit the Cypress [website](#) or contact the local sales representative.

Table 11. Ordering Information

| Serial No. | Ordering Part Number | Number of DS Ports | Number of Shared Link Ports | Ghost Charge | ACA-Dock | Temperature | Package |
|------------|----------------------|--------------------------------|-----------------------------|--------------|----------|-------------|---------|
| 1. | CYUSB3302-68LTXC | 2 (USB 3.0) | 0 | Yes | No | 0-70 °C | 68-QFN |
| 2. | CYUSB3302-68LTXI | 2 (USB 3.0) | 0 | Yes | No | -40-85 °C | 68-QFN |
| 3. | CYUSB3304-68LTXC | 4 (USB 3.0) | 0 | Yes | No | 0-70 °C | 68-QFN |
| 4. | CYUSB3304-68LTXI | 4 (USB 3.0) | 0 | Yes | No | -40-85 °C | 68-QFN |

| SYMBOL | DIMENSIONS | | |
|--------|------------|------|------|
| | MIN. | NOM. | MAX. |
| A | - | - | 1.00 |
| A1 | 0.16 | - | - |
| D | 6.00 BSC | | |
| E | 6.00 BSC | | |
| D1 | 4.50 BSC | | |
| E1 | 4.50 BSC | | |
| MD | 10 | | |
| ME | 10 | | |
| N | 100 | | |
| ∅ b | 0.25 | 0.30 | 0.35 |
| eD | 0.50 BSC | | |
| eE | 0.50 BSC | | |
| SD | 0.25 BSC | | |
| SE | 0.25 BSC | | |

NOTES:

- ALL DIMENSIONS ARE IN MILLIMETERS.
 - SOLDER BALL POSITION DESIGNATION PER JEP95, SECTION 3, SPP-020.
 - "e" REPRESENTS THE SOLDER BALL GRID PITCH.
 - SYMBOL "MD" IS THE BALL MATRIX SIZE IN THE "D" DIRECTION. SYMBOL "ME" IS THE BALL MATRIX SIZE IN THE "E" DIRECTION. N IS THE NUMBER OF POPULATED SOLDER BALL POSITIONS FOR MATRIX SIZE MD X ME.
5. DIMENSION "b" IS MEASURED AT THE MAXIMUM BALL DIAMETER IN A PLANE PARALLEL TO DATUM C.
6. "SD" AND "SE" ARE MEASURED WITH RESPECT TO DATUMS A AND B AND DEFINE THE POSITION OF THE CENTER SOLDER BALL IN THE OUTER ROW. WHEN THERE IS AN ODD NUMBER OF SOLDER BALLS IN THE OUTER ROW "SD" OR "SE" = 0. WHEN THERE IS AN EVEN NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" = eD/2 AND "SE" = eE/2.
7. A1 CORNER TO BE IDENTIFIED BY CHAMFER, LASER OR INK MARK METALIZED MARK, INDENTATION OR OTHER MEANS.
- "+" INDICATES THE THEORETICAL CENTER OF DEPOPULATED SOLDER BALLS.
 - JEDEC SPECIFICATION NO. REF. : MO-195C.

Units of Measure

Table 16. Units of Measure

| Symbol | Unit of Measure |
|--------|--------------------|
| °C | degree celsius |
| Ω | ohm |
| Gbps | gigabit per second |
| KB | kilobyte |
| kHz | kilohertz |
| kΩ | kiloohm |
| Mbps | megabit per second |
| MHz | megahertz |
| μA | microampere |
| mA | milliampere |
| ms | millisecond |
| mW | milliwatt |
| ns | nanosecond |
| ppm | parts per million |
| V | volt |

Silicon Revision History

This datasheet is applicable for the USB-IF certified (TID# 330000060) HX3 Rev. *D and Rev. *C Silicon.

Rev. *D: This Silicon revision improves the yield of HX3, and is drop-in compatible for all the part numbers. There is no need to change the board design or layout to use the HX3 Rev. *D Silicon. Products are completely compatible with the HX3 Rev. *C Silicon.

Rev. *C: This Silicon revision fixes the errata applicable to the Rev. *A Silicon.

The following table defines the changes between Rev. *A, Rev. *C, and Rev. *D Silicon.

| No. | Items | Part Numbers | Rev. *A | Rev. *C | Rev. *D |
|-----|--|--------------|--------------------------------------|-----------------------------|-----------------------------|
| 1 | USB-IF Compliance | All | Requires firmware on external EEPROM | No external EEPROM required | No external EEPROM required |
| 2 | FS-only hub or host connected to HX3 Upstream Port | All | Not supported | Supported | Supported |
| 3 | Suspend Power | All | 90 mW | 37.8 mW | 37.8 mW |

Method of Identification

Markings on row 3 of the HX3 package differentiate Rev. *D Silicon from Rev. *C Silicon and Rev. *A Silicon as indicated in the example below. Cypress maintains traceability of product to wafer level, including wafer fabrication location, through the lot number marked on the package.

HX3 REV *A SILICON

HX3 REV *C SILICON

HX3 REV *D SILICON
