The stating herein of these maximums shall not be construed to imply that the device can or should be operated at or beyond these values. The table of "Electrical Characteristics" specifies acceptable device operating conditions.

**Note 2:** Current flow into device pins is defined as positive. Current flow out of device pins is defined as negative. All voltages are stated referenced to  $V_{EE} = 0$  Volts.

## Device Operation

### INPUT INTERFACING

The CLC002 accepts either differential or single-ended input. The inputs are self-biased, allowing for simple AC or DC coupling. DC-coupled inputs must be kept within the specified common-mode range. SDI and  $\overline{\text{SDI}}$  are self-biased at approximately 2.1V with  $V_{CC} = 3.3V$ . Figure 1 shows the differential input stage for SDI and  $\overline{\text{SDI}}$ .

20087604

FIGURE 1. Differential Input Stage for SDI and  $\overline{\text{SDI}}$ .

### OUTPUT INTERFACING

The CLC002 uses current mode outputs. Single-ended output levels are 800 mV<sub>P-P</sub> into 75Ω AC-coupled coaxial cable (with  $R_{REF} = 750\Omega$ ). Output level is controlled by the value of the  $R_{REF}$  resistor connected between pin 4 and  $V_{CC}$ .

The  $R_{REF}$  resistor should be placed as close as possible to the  $R_{REF}$  pin. In addition, the copper in the plane layers below the  $R_{REF}$  network should be removed to minimize parasitic capacitance.

### OUTPUT SLEW RATE CONTROL

The CLC002 output rise and fall times are selectable for either SMPTE 259M or SMPTE 292M compliance via pin 6, SD/ $\overline{HD}$ . For slower rise and fall times, or SMPTE 259M compliance, SD/HD is set high. For faster rise and fall times, or SMPTE 292M compliance, SD/ $\overline{HD}$  is set low.

### REPLACING THE GENNUM GS1528

The CLC002 is form-fit-function compatible with the Gennum GS1528 and GS1528A.
