- Operating Voltage Range of 4.5 V to 5.5 V
- State-of-the-Art BiCMOS Design Significantly Reduces ICCZ
- Full Parallel Access for Loading
- Buffered Control Inputs

- 3-State Outputs Drive Bus Lines or Buffer Memory Address Registers
- ESD Protection Exceeds JESD 22
- 2000-V Human-Body Model (A114-A)

## SN54BCT374... FK PACKAGE

(TOP VIEW)

## description/ordering information

These 8 -bit flip-flops feature 3 -state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. They are particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.
The eight flip-flops of the 'BCT374 devices are edge-triggered D-type flip-flops. On the positive transition of the clock (CLK) input, the Q outputs are set to the logic levels that were set up at the data (D) inputs.

A buffered output-enable ( $\overline{\mathrm{OE}}$ ) input can be used to place the eight outputs in either a normal logic state (high or low) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and the increased drive provide the capability to drive bus lines without need for interface or pullup components. The output-enable ( $\overline{\mathrm{OE}})$ input does not affect internal operations of the flip-flop. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

ORDERING INFORMATION

| $\mathrm{T}_{\mathbf{A}}$ | PACKAGE $\dagger$ |  | ORDERABLE PART NUMBER | TOP-SIDE MARKING |
| :---: | :---: | :---: | :---: | :---: |

## description/ordering information (continued)

To ensure the high-impedance state during power up or power down, $\overline{\mathrm{OE}}$ should be tied to $\mathrm{V}_{\mathrm{CC}}$ through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

NABLE
(each flip-flop)

| INPUTS |  |  |  |
| :---: | :---: | :---: | :---: |
| $\overline{\text { OE }}$ | OUTPUT |  |  |
| CLK | $\mathbf{D}$ | $\mathbf{Q}$ |  |

## logic diagram (positive logic)

To Seven Other Channels

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted) $\dagger$

Supply voltage range, $\mathrm{V}_{\mathrm{CC}}$
-0.5 V to 7 V

Voltage range applied to any output in the disabled or power-off state, $\mathrm{V}_{\mathrm{O}} \ldots \ldots . . \ldots . .$.
Voltage range applied to any output in the high state, $\mathrm{V}_{\mathrm{O}} \ldots \ldots \ldots \ldots \ldots \ldots \ldots . .$.

Current into any output in the low state: SN54BCT374 ............................................ 96 mA
SN74BCT374 ............................................. 128 mA

N package ............................................. $69^{\circ} \mathrm{C} / \mathrm{W}$
NS package ........................................ $60^{\circ} \mathrm{C} / \mathrm{W}$

$\dagger$ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. The package thermal impedance is calculated in accordance with JESD 51-7.
recommended operating conditions (see Note 3)

## PARAMETER MEASUREMENT INFORMATION

LOAD CIRCUIT FOR TOTEM-POLE OUTPUTS

## LOAD CIRCUIT FOR

3-STATE AND OPEN-COLLECTOR OUTPUTS

VOLTAGE WAVEFORMS
PROPAGATION DELAY TIMES (see Note D)

VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES, 3-STATE OUTPUTS

NOTES: A. $C_{L}$ includes probe and jig capacitance.
B. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 10 \mathrm{MHz}, \mathrm{t}_{\mathrm{r}}=\mathrm{tf}_{\mathrm{f}} \leq 2.5 \mathrm{~ns}$, duty cycle $=50 \%$.
C. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
D. The outputs are measured one at a time with one transition per measurement.
E. When measuring propagation delay times of 3-state outputs, switch S1 is open.
F. All parameters and waveforms are not applicable to all devices.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to Tl's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with Tl's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI .

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. Tl is not responsible or liable for such altered documentation.

Resale of Tl products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice.
